

# PRYING TOOL WITH POSITIONABLE HANDLE

## Abstract of the Disclosure

5           Disclosed is a prying tool having a head portion and a handle  
portion. The handle portion can be positioned relative to an angle of the  
head portion. Additionally, in some embodiments, the handle portion can  
be separated from the head portion. Embodiments of the invention also  
include a tool head having an aperture with a predetermined shape that  
10   can be mated with a projection from a handle. The predetermined shape of  
the aperture and projection allows the handle to be attached to the  
removable head in a variety of positions.
